ACADEMIC RESEARCH EXPERIENCE

Semi-Supervised Domain Adaptation for Regression Task

Present

Designing and implementing a model capable of learning from a source domain and then perform well on a second domain called target domain.

Paragraph Generation for Untrimmed Video

Describing multiple events in untrimmed news videos from Thomson Reuters with descriptive paragraphs. (in collaboration with Vector Institute)

Cross-Modal Generation

Generating corresponding audio of a video using for a variety of categories state-of-the-art deep learning models and transformers. Image Restoration

Restoring old photos that suffer from severe degradation through training two variational autoencoders (VAEs) to respectively transform old photos and clean photos into two latent spaces.

Multiple Object Tracking

Fall 2020

Tracking people in crowded scenes by exploiting the bounding box regression of an object detector to predict the position of an object in the next frame, thereby converting a detector to a tracktor.

Dialogue Generation
